Tilt Paint

Tilt objects in random direction to paint them!

Submitted by <Aniket Rajnish / Makra>

The Game in a Nutshell

The Basics

The player has to adjust & tilt the level to paint random objects with different color options provided on the screen. The users get a score in the end depending upon the quality of paint they did.

Sub Genre

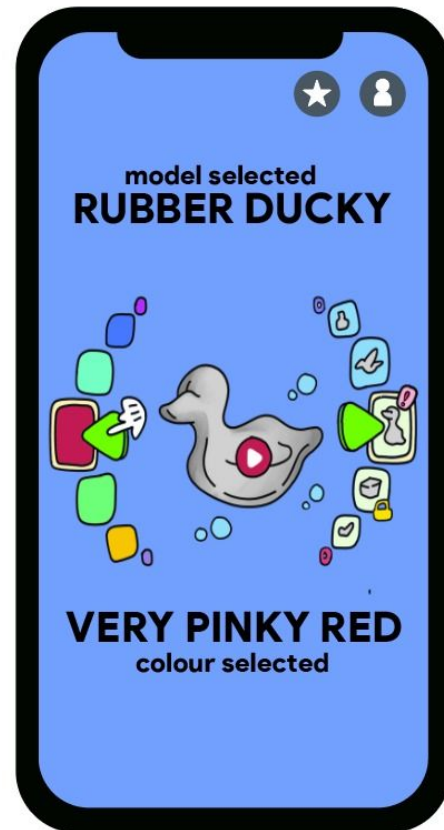

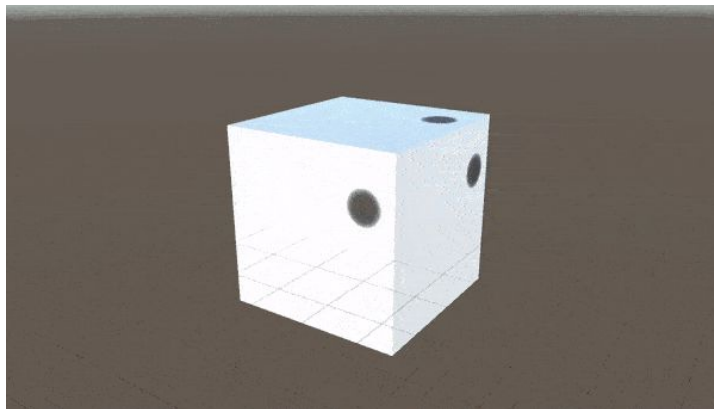

Puzzle/ Logic

Mechanic

Swerve to tilt the screen

Controls

Touch / Swerve

Difficulty and Progress

How do I progress at this game?

- Objects with more complex geometry and paints with multicoloured shaders as we proceed further in the game.
- Objects with multiple meshes as we proceed further.

Lose Conditions

- If the object doesn't get painted according to desired outcome in the given time.

The Video Ad

What are we going to see in the ad?

- The ad starts with a white mesh of some trending object (like among us character, fidget spinner, pokemon etc) and the player paints it very quickly and gets rewarded!
- A clip where the video shows the player choosing the wrong colors and losing so as to tempt the viewer to download the game.
